

TECHNICAL BULLETIN

Required Financial and Responsible Gaming Data Files

Overview:

Per the Tennessee Sports Gaming Act, 4-51-304(d), the TEL will use a centralized accounting and reporting system to ascertain wagers, cancels, payouts, resettlements, voids, adjustments and any other information required by the TEL. All approved Licensees shall utilize the TEL's central accounting and reporting system.

Licensees are required to provide the sport league id assigned by the TEL for required data elements. The sport league id will be comprised of seven digits, with the first three digits representing the sport and final four digits identifying the league. The TEL will provide and maintain a list of all sport league ids for Licensees to access. Additional details will be provided to all approved licensees.

Per Tennessee Sports Gaming Act, 4-51-319(a), Licensees shall implement a method for allowing bettors to restrict themselves from placing wagers with the Licensee, as well as allowing this information to be shared with other Licensees. The TEL has developed a self-exclusion and ineligible bettor's process and will provide details to approved Licensees.

Licensee must pass all required data files in the format defined by the TEL. All Licensees must submit test files for the certification process.

A Secure File Transfer Portal (SFTP) will be used to pass encrypted files back and forth between the TEL and Licensee. An RSA public/private key pair will be provided to the Licensee to authenticate the sender. The Licensee will provide a list of IP addresses that are allowed to connect. Additional details regarding the SFTP will be provided to all approved Licensees.

Once each file has been processed, a summary email can be sent to the Licensee confirming receipt of the data.

Requirements:

All Licensees must be in compliance with this directive by the later of July 31, 2021 or 30 days after first day of operations.

Additional Information:

The TEL will provide each Licensee a technical specifications document detailing all required files and access to the SFTP once the Licensee has been approved.
